## DrySmart.net

### What Is **DrySmart?**

**DrySmart** RMC<sup>™</sup> is an affordable field installable upgrade for existing dryers, with the same performance and benefits of factory installed Residual Moisture Control.

When **DrySmart** is installed, the dryer immediately has fully automatic moisture control, and immediately begins saving the laundry money.

**DrySmart** is an easily installed plug and play device. The dryer is not modified; no drilling, no cutting wires. Typical installation time is about 15 minutes.

# Save Energy Save Money

#### How Does *DrySmart* Work?

**DrySmart** uses patent pending software to accurately determine laundry moisture content, with no added probes or sensors.

When **DrySmart** determines that the laundry is dry, it reduces the heat to about 10%, and keeps the laundry nicely warm until the dryer stops.

**DrySmart** is a totally enclosed electronic product, small enough to hold in one hand.

**DrySmart** requires no maintenance and will perform for years without attention.

## Data Logging

Every **DrySmart** maintains a detailed data log for the dryer in which it is installed.

#### Available Parameters Include:

**Total Turns** 

**Total Truncated Turns** 

**Total Completed Turns** 

Total Dryer Run Minutes

Average Minutes per Turn

Total Overdry Time Saved

Average Overdry Time Saved per Turn

Total Overdry Energy Saved

prevents dryer
running after the laundry
is dry, reducing turn time,
increasing yield, and reducing
utility cost.

New iPhone / iPad App

Downloads each DrySmart log and sends data to our servers.

We return a clean easy to read Data Analysis Report, that shows actual energy saved and useful dryer operation data.

Fast and easy to use. Available free on the App Store.
